

Current Status and Future Prospects of Voice Biomarkers

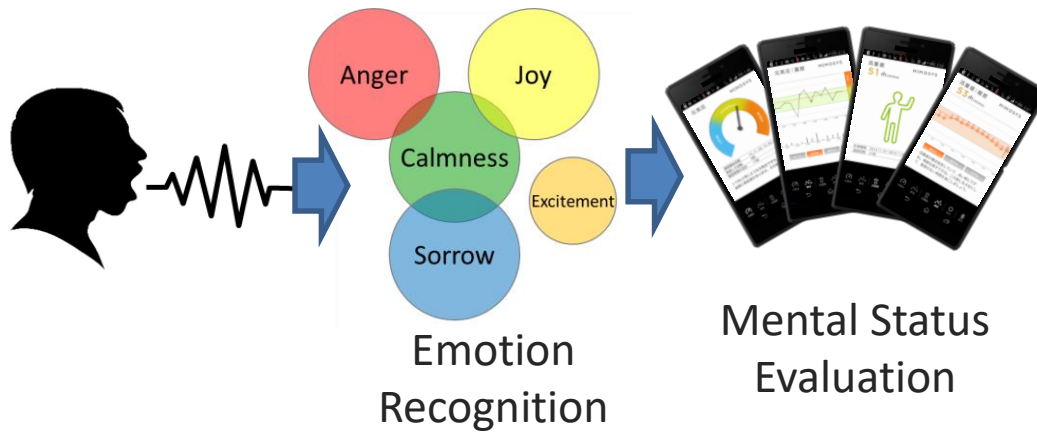

Shinichi Tokuno, M.D., Ph.D.
Project Associate Professor,
Dept. of Voice Analysis of Pathophysiology
Graduate School of Medicine
The University of TOKYO

Voice-based Evaluations

The human machine interface has evolved from the keyboard, through the mouse and the touch panel into the voice.

Vitality

Mental Status at the time

Mental Activity

Trend of Mental Status during 2 weeks

We have constructed a monitoring system to measure the degree of stress and depression from the voice

Voice-based Evaluations

Non-invasive
and Easy

Remote-
monitorable

No special
devices

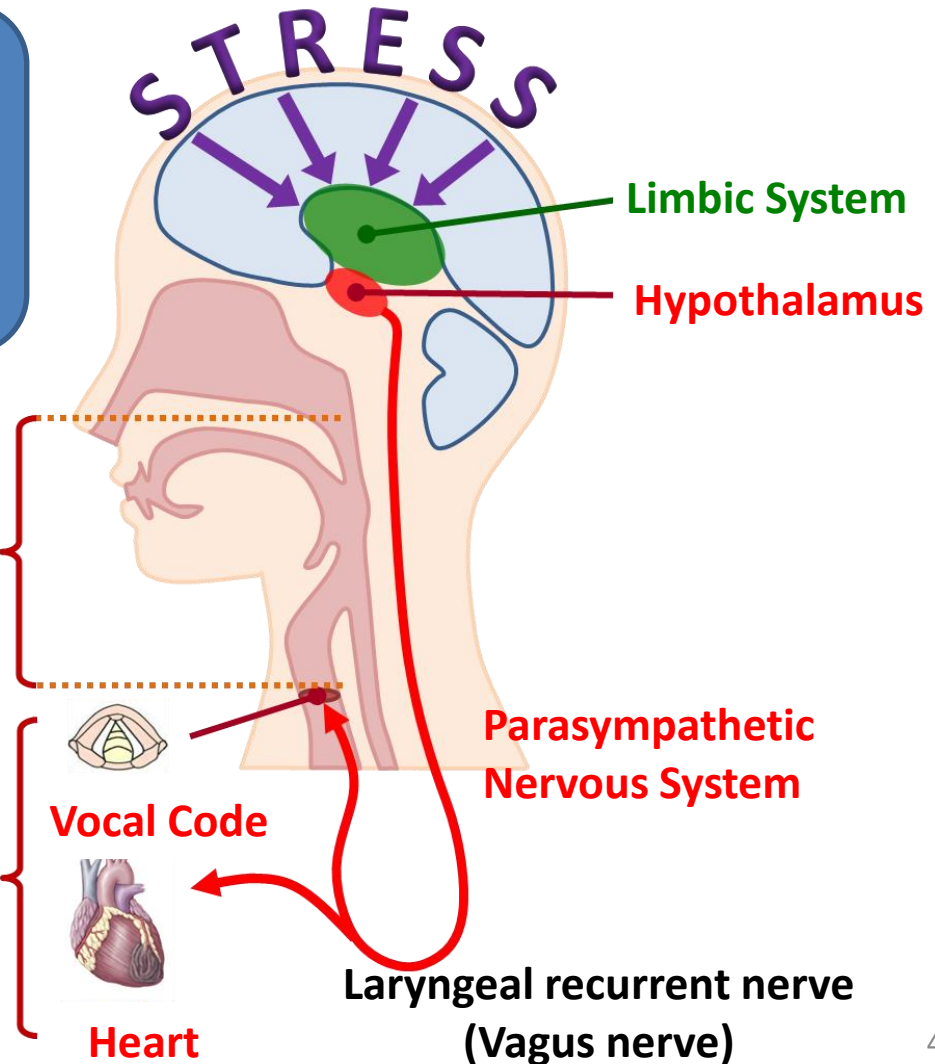

Voice Stress Biomarker

Emotion and autonomic nervous

Voice includes not only quantitative but also qualitative information.

Formant
(Voluntary Reaction)

Involuntary
Reaction

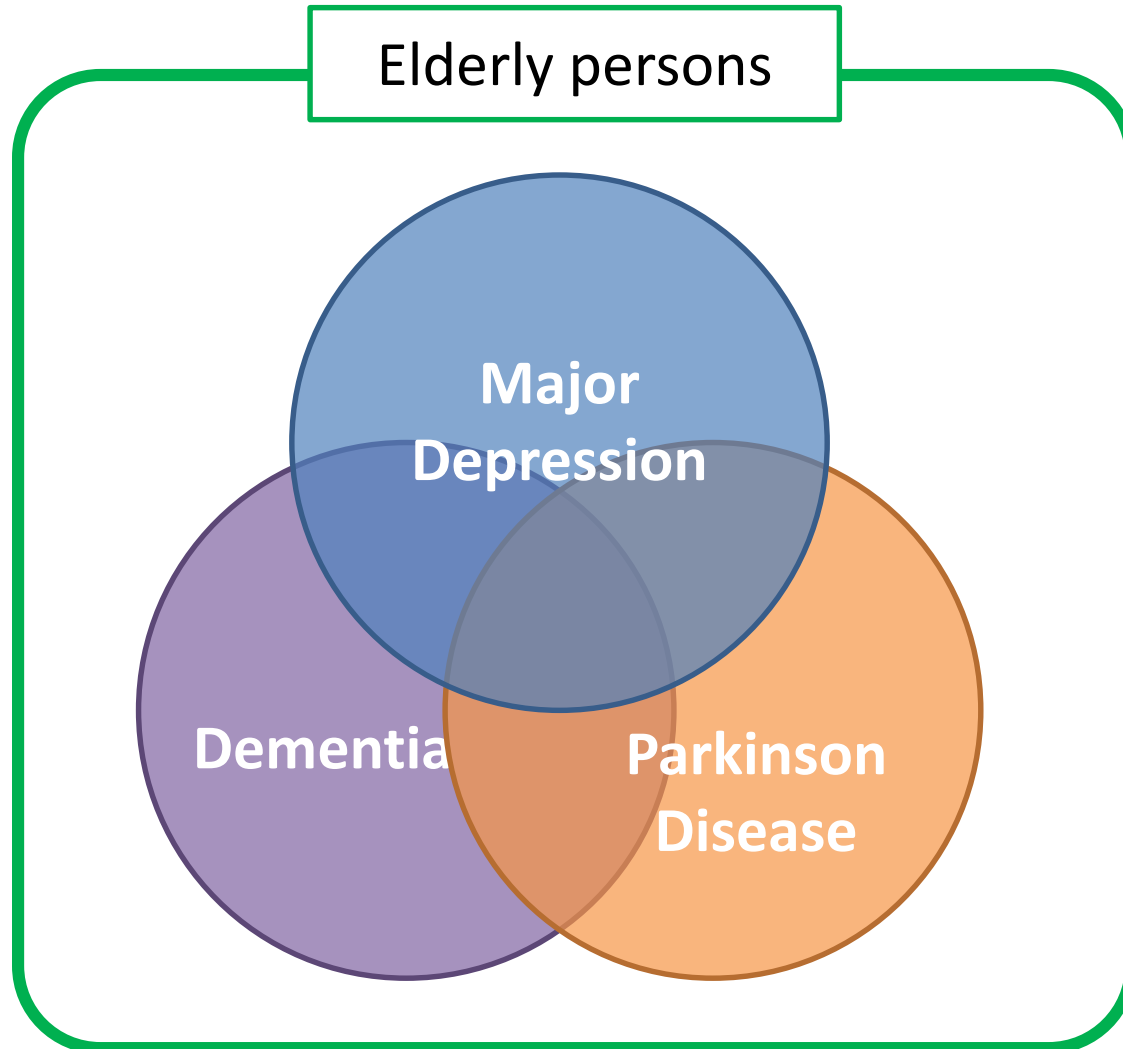

Biomarker requirements

- ✓ High Sensitivity
 - High detection rate & low oversight
 - Less false negatives
- ✓ High Specificity
 - Fewer false positives
- ✓ Discrimination ability
 - High differential diagnostic capabilities

Previous voice biomarker studies have not discussed differential diagnostic capabilities.

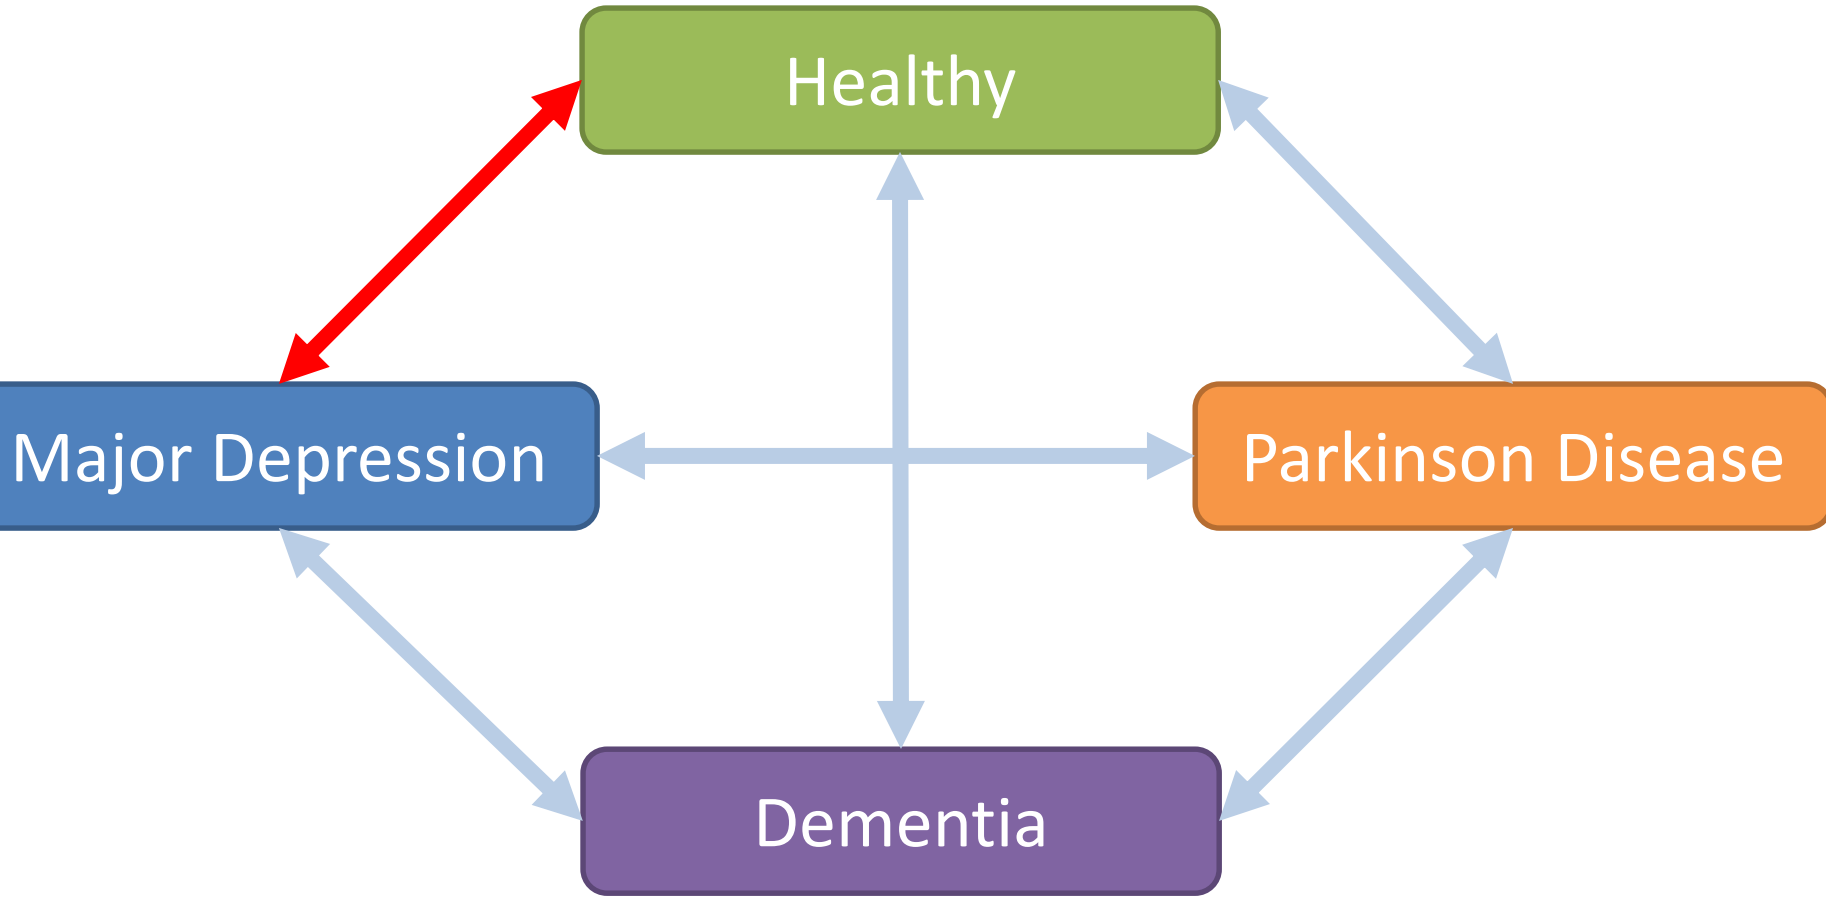

Application to other diseases (Disease to be distinguished)

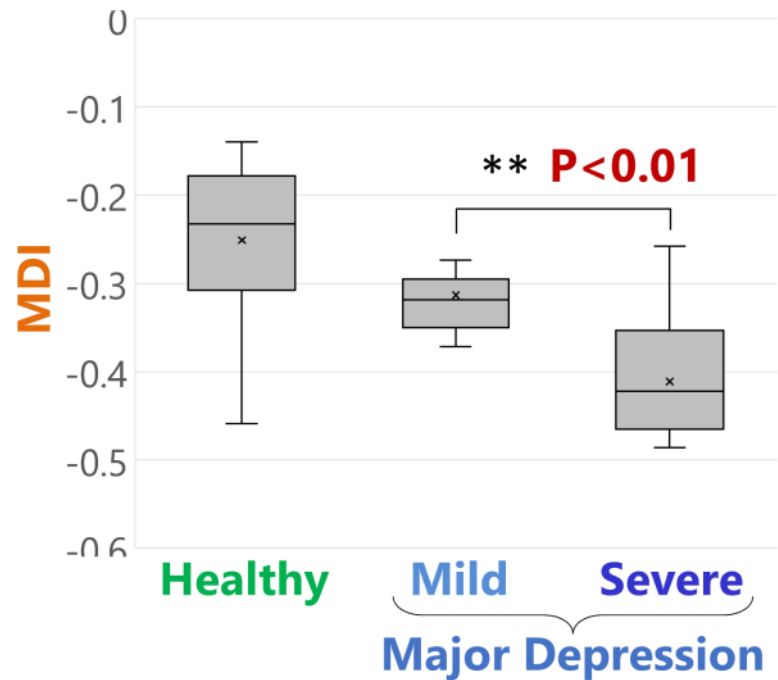

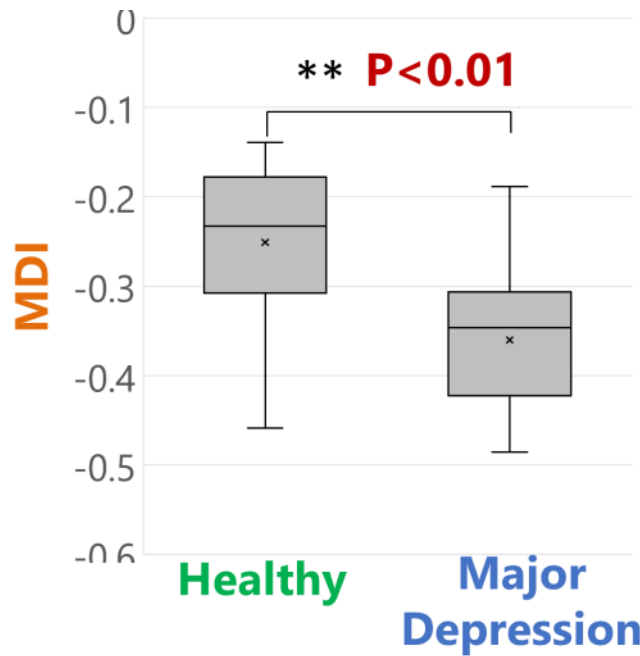

Development of new analytical methods
Differential diagnosis

Search for characteristic parameters for each disease

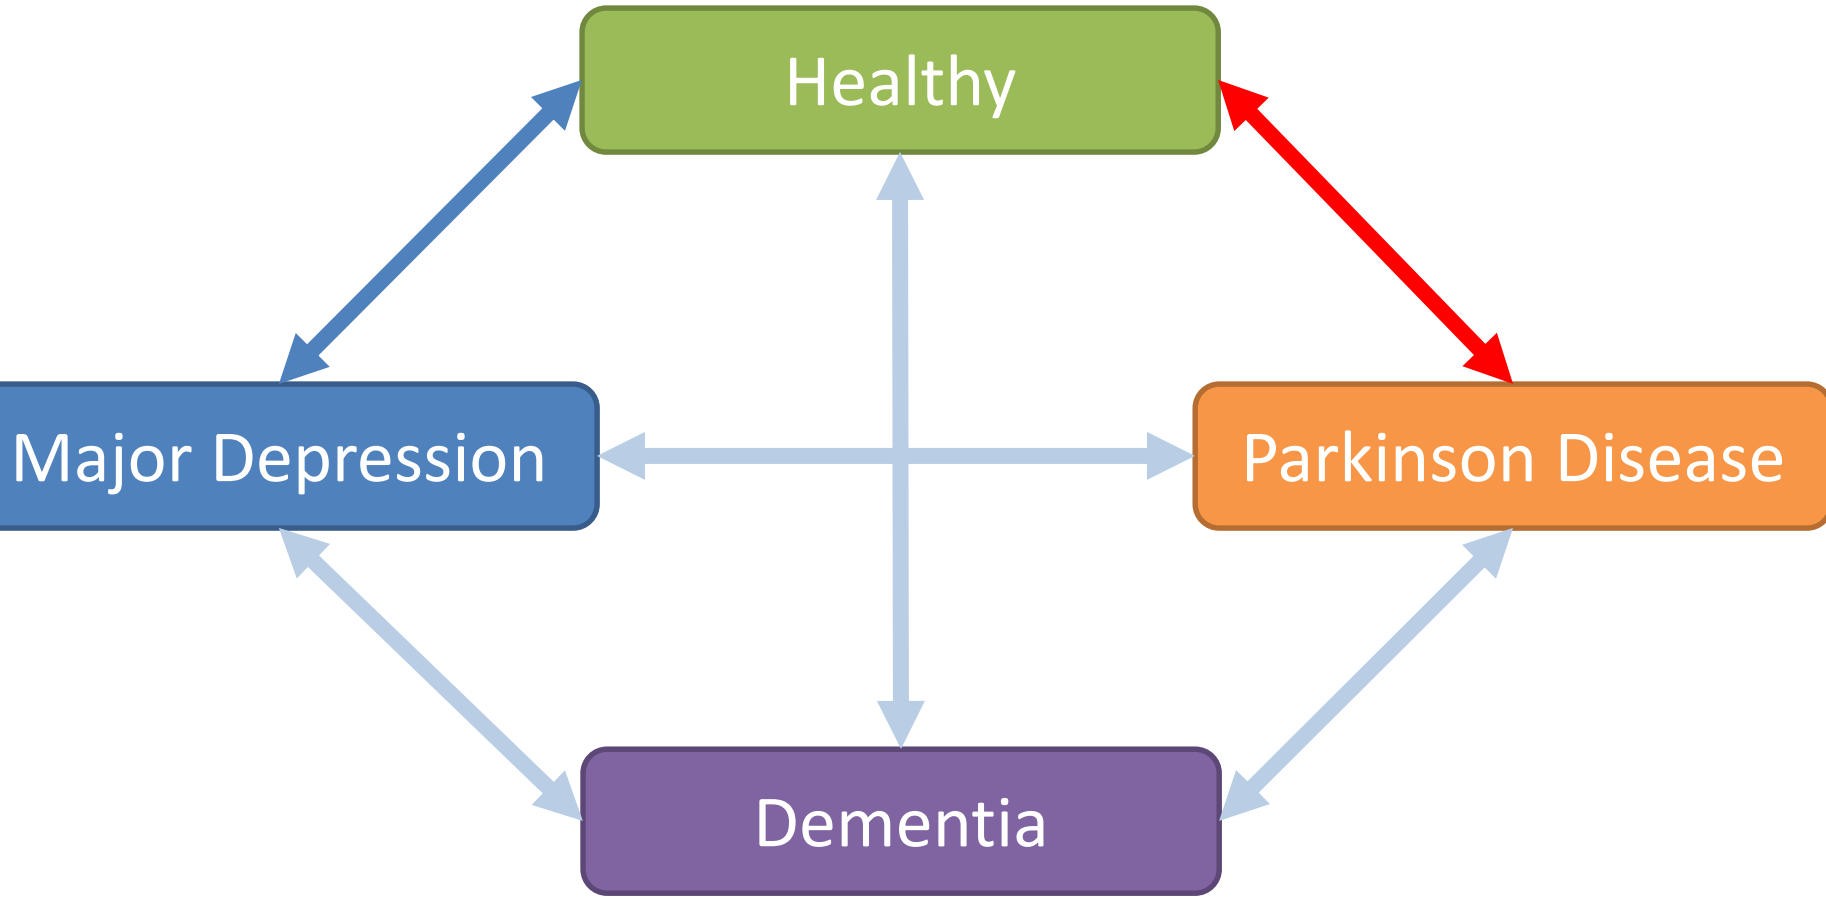

Major Depression

Discrimination Type	AUC	Sensitivity	Specificity
Healthy - Major Depression	0.85	0.88	0.74
Mild MD - Severe MD	0.88	1.00	0.75

Development of new analytical methods
Differential diagnosis

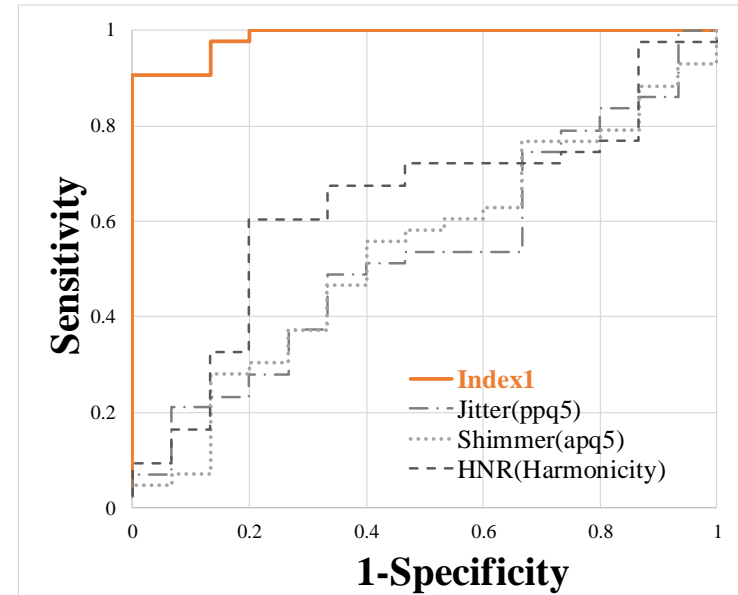

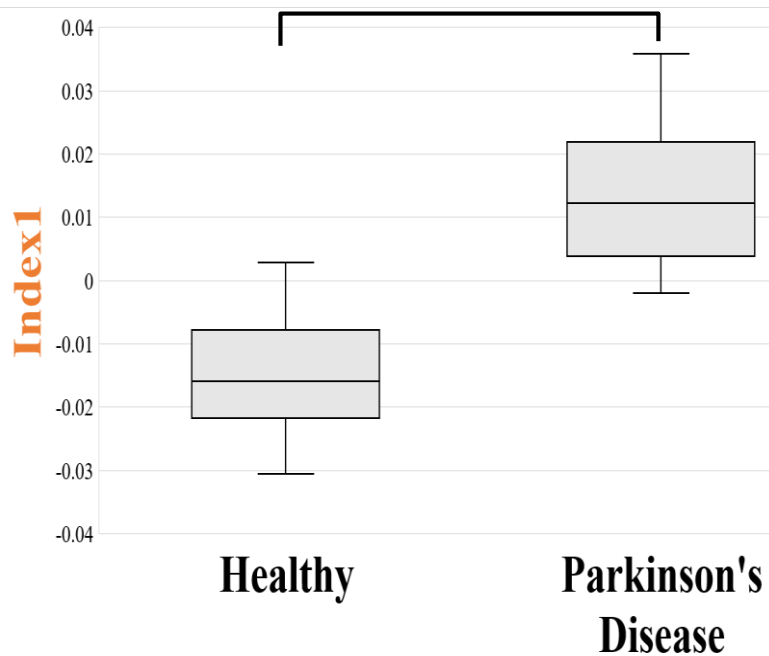

Search for characteristic parameters for each disease

Parkinson Disease

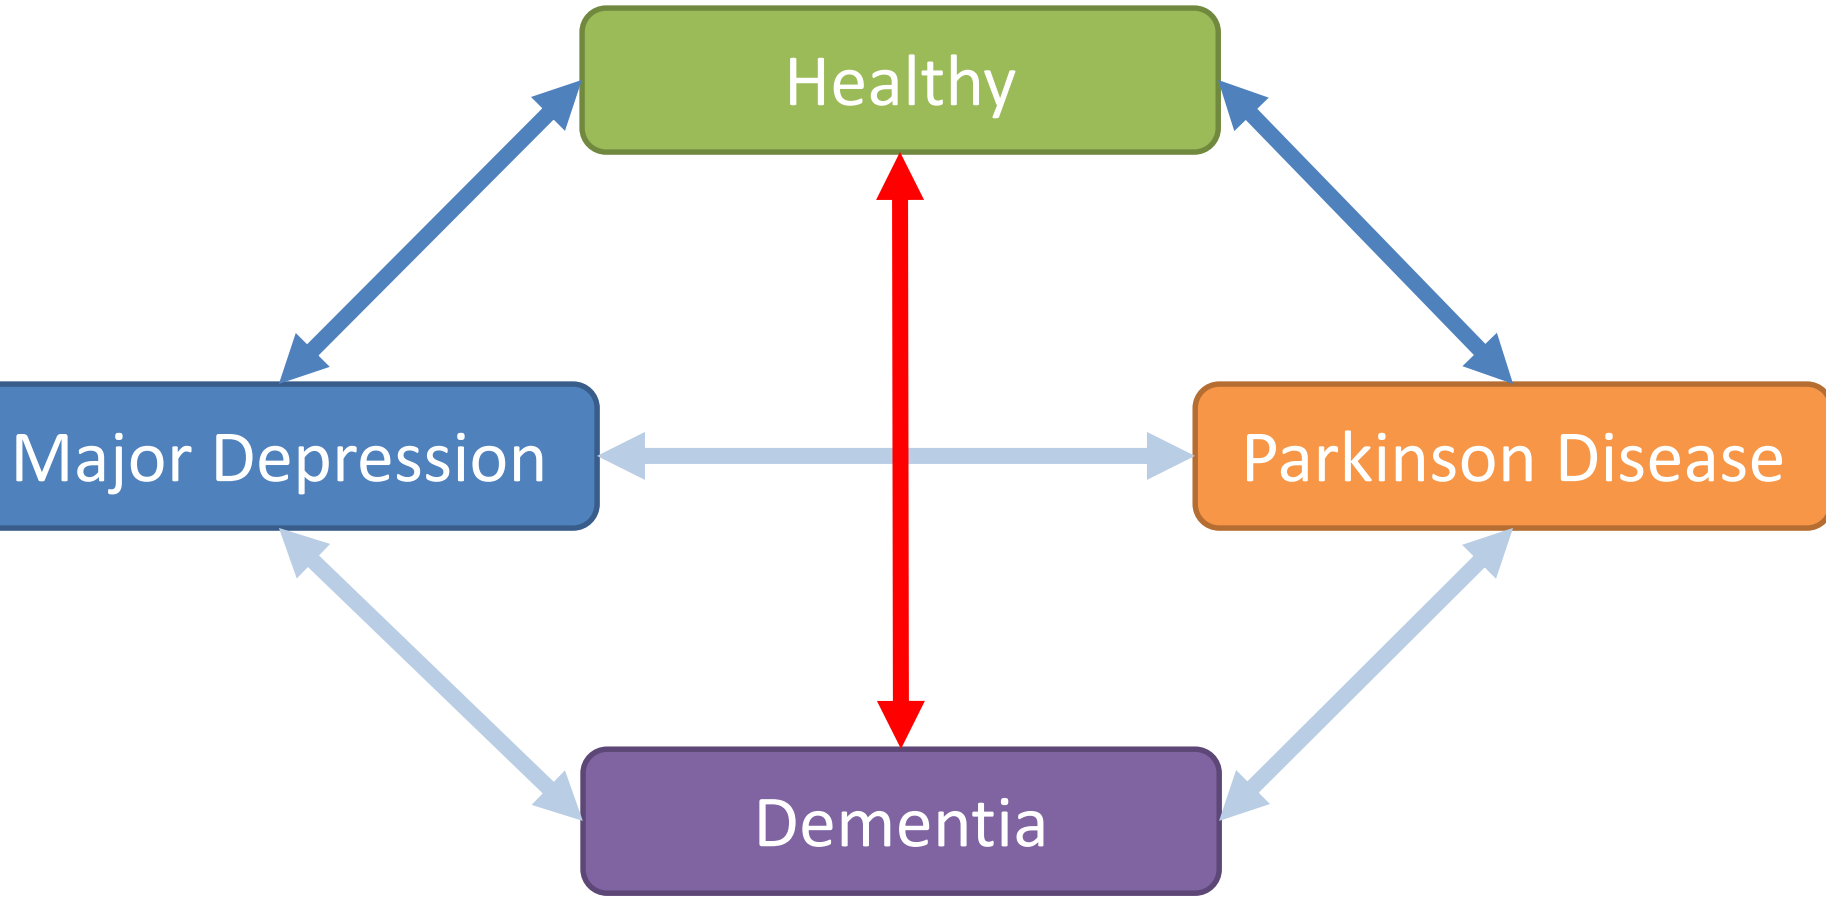

$P < 0.01$ **

Index	AUC	Sensitivity	Specificity
Jitter	0.533	0.488	0.667
Shimmer	0.536	0.558	0.600
HNR	0.632	0.604	0.800
Index1	0.986	0.907	1.0

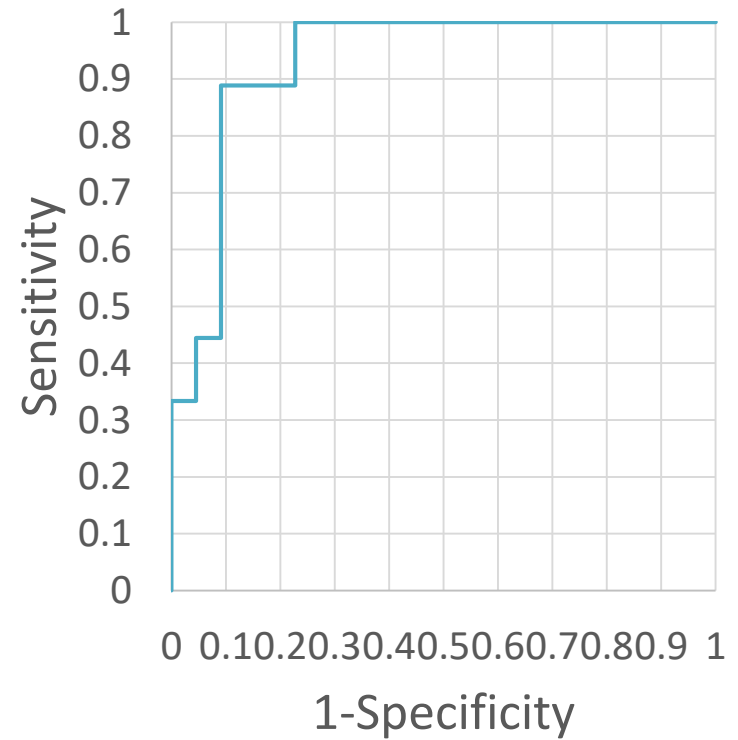

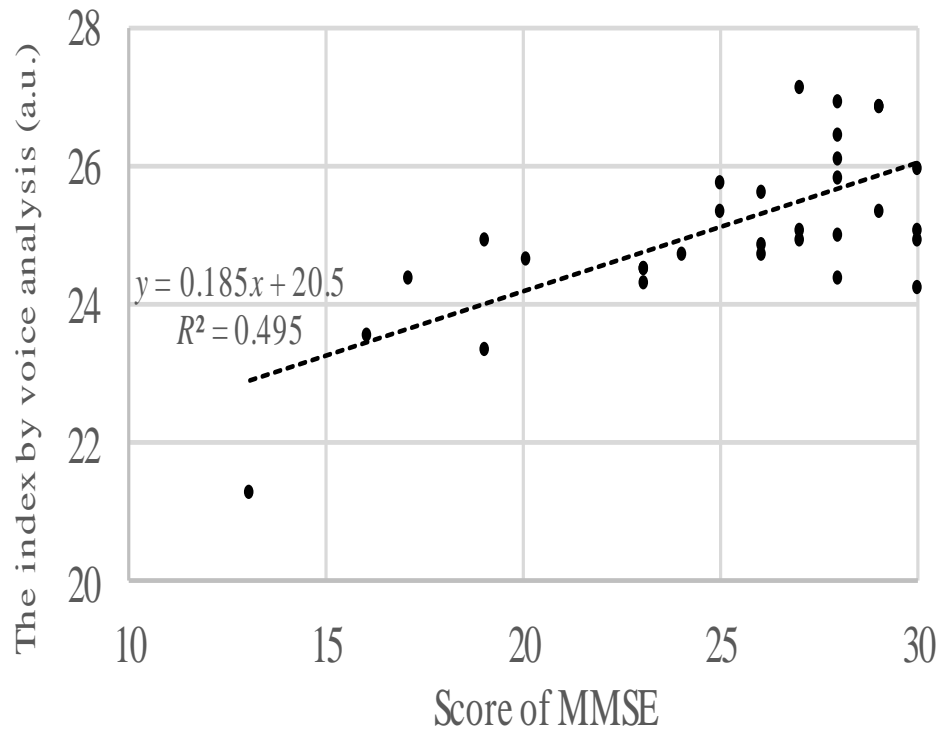

Development of new analytical methods
Differential diagnosis

Search for characteristic parameters for each disease

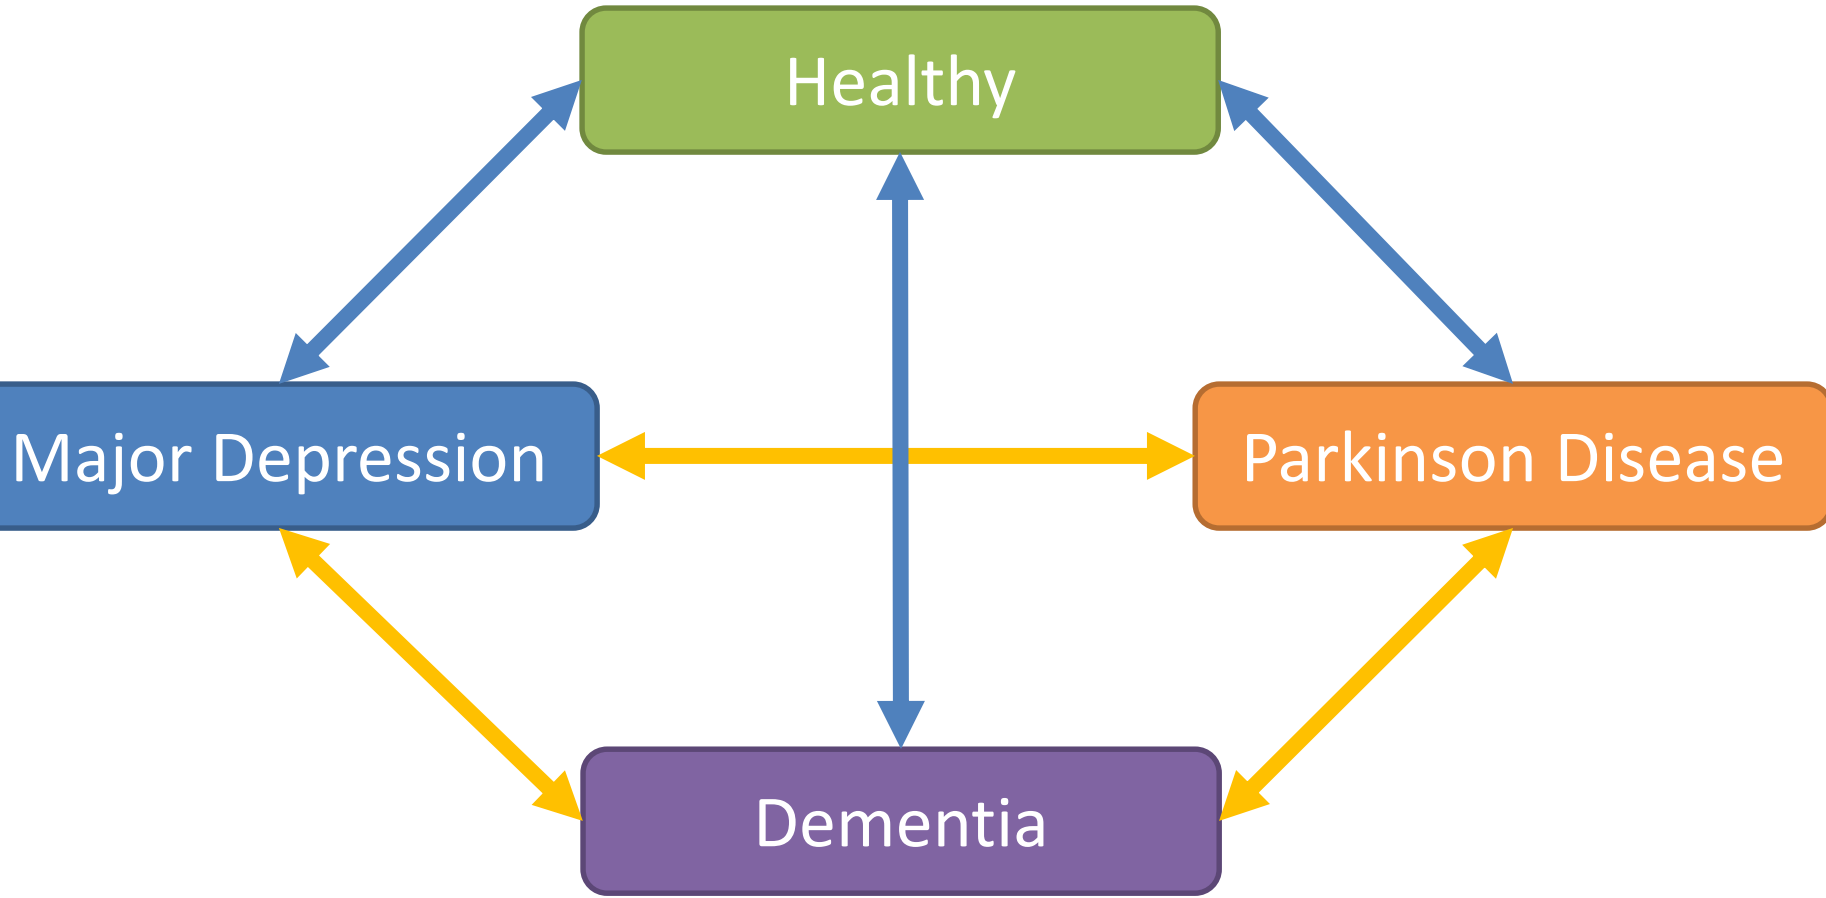

Dementia

Development of new analytical methods
Differential diagnosis

Search for characteristic parameters for each disease

Development of new analytical methods Differential diagnosis

Although detailed data can not be shown before submission of the paper, sufficient discrimination ability was obtained in the group of 3 diseases + healthy with multiple methods.

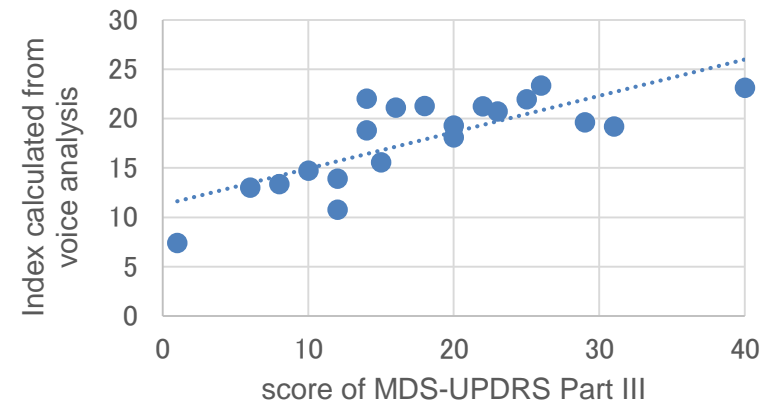

Development of new analytical methods

Differential diagnosis

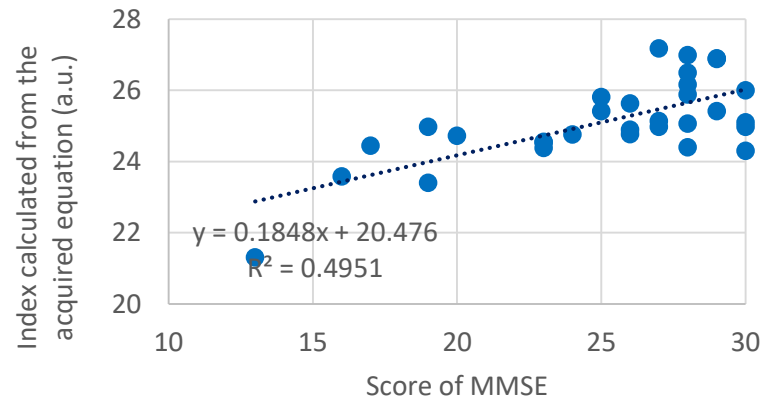

Appendix: Discrimination by multiple linear regression analysis
